

# Project study

on the transformation of the Cost Accounting course to an innovative MOOC

## About the project

Massive Open Online Courses (MOOCs) are interactive online courses that are accessible around the world and free of charge. The Technical University of Munich is one of the first German universities that develops and launches its own MOOCs on large platforms such as edX, and Coursera. By our steadily growing offer of these courses, we have enriched teaching and learning in our university and we give an international and diverse audience the chance to access high quality education.

With the Project “Cost Accounting” we aim at making one of the largest course at our faculty available to a wider public as a MOOC. We will develop an online course that will allow TUM students, as well as the wider public, to participate in the course from home benefiting from innovative learning tools and methods. The project is scheduled for 3 months in the period starting September and ending December.

## Your tasks

During your project study you will be in charge of the:

- Development of digital teaching materials
- Supporting the creation of teaching videos
- Implementation of the lecture content in Coursera

## What you should bring:

- Studies in Business Administration or Informatics
- Ideally completed the Cost Accounting / Kostenrechnung course
- English and German proficiency
- Self-initiative, independent and conscientious working style

## What we offer:

- A collegial working environment
- If desired a large part of the work can be done from home

## Interested?

Then we look forward to receiving your application (curriculum vitae including your high school diploma grade and a current transcript of records) by e-mail to Anamarija Delic (anamarija.delic@tum.de).
