IDP - Web Application Development

Who we are
At Breathment we are developing a web-based software that digitizes pulmonary rehabilitation for health professionals and their patients. Breathment's AI-based software provides these patients a digital physiotherapist experience on their physiotherapy exercises at home. In addition, it gives health professionals a data-driven tool to optimize and control the treatment based on their patients' individual needs, without physical presence.

What you will do
• Developing a web-based app (admin panel) using Angular 9 and TypeScript, that allows customers to configure their dashboard and management of users.
• Integrating subscription management software into the admin panel:
  ○ Developing subscription/cash flow management and billing features.
  ○ Displaying revenue, product, and customer trends analytics.
  ○ Creating an optimization tool for subscription models based on the habits of the customers.

What we expect from you
• Experience with Angular 2+, JavaScript/TypeScript, HTML, CSS and Bootstrap
• Familiarity with version control (Git), GitHub (or similar)
• Strong analytical thinking
• Proficiency in English
• Passion about startups, willingness to learn and taking responsibility

Information & Next Steps
• Duration: full time for three months (40h/week) or part time for six months (20h/week)
• Location: Munich/Remote
• If you are interested, please send your CV, your preferred start date and a short motivation letter of why you are the right person for this project study to elcin.cavusoglu@breathment.com
