

## About econvio

At [econvio](#) we aim to give 200 million Europeans living in apartment buildings access to **affordable and sustainable energy**. To achieve this, we connect and precisely control energy systems to reduce emissions and costs.

econvio was founded by [Caro](#) (prev. Synthesia, Nvidia) and [Kai](#) (prev. Orbem, BCG), both alumni of the Center for Digital Technology and Management (CDTM).

## The project

**Develop a product roadmap for our econvio energy platform.** This includes:

- **Interviews with (potential) customers:** understand what drives decision makers in real estate companies, prioritize problems and assess willingness to pay.
- **Competitor and market analysis:** assess the positioning and strategy of competitors, quantify the market potential of different segments and derive recommendations for our product strategy.
- **Resource planning:** identify the resources needed (time + people) to execute the proposed product roadmap.

## Who we look for

- **Self-starters:** you take control of the project and drive progress.
- **Passion for impact:** you care about solving a truly important problem.
- **Teampayers:** you thrive working with others in a fast-paced environment.

## Why econvio

Become part of a driven team working on solving one of the toughest challenges of our generation: decarbonizing Europe's building stock.

We offer you a plain field to explore and design. During your time with econvio, we support you in discovering your strengths and defining a vision for your professional future.
